- Password Protection
- Time-based Answering (open/close)

MiniVoice is an entry-level, user-friendly voice mail system with basic features and message storage. This compact, 4-port voice mail solution has 32 mailboxes and up to 1.5 hours of message storage. That's everything you need to get your business started using voice mail. Just like larger organizations, you now have access to the same essential communications tool that allows callers to get through to your business quickly, even during busy times and off-hours. Best of all, this product quickly integrates with Vodavi's entire line of business communications systems as well as most other telephone systems.

Features to Fit Your Needs

MiniVoice offers a host of user-friendly features, such as time and date stamp, password protection, message wait light and message routing. In addition, DTMF Administrative Programming allows users to retrieve messages and change their voice mail parameters from any touch-tone phone. Another popular and convenient feature is that MiniVoice can be programmed with pager notification to alert users when they have a new voice mail message.

Automated Attendant

For those businesses needing auto attendant capability, MiniVoice's auto attendant allows callers to bypass the menu of recorded extensions when they simply dial the extension they wish to reach. This expedites the call, giving callers the information they need as quickly as possible.

Ease of Use

MiniVoice uses single digit commands, so there are no complex commands to memorize. The system constantly prompts users for the next action to be taken.
